

WD-5400 Series Storage Brackets, Tie-Down Straps and Wheel Pans

Optional Bracket Kits and Accessories

Dolly Side Frame Storage Brackets:

WD-5260 Tall Bracket Kit (9 9/16") for 4.80x8 Dollies

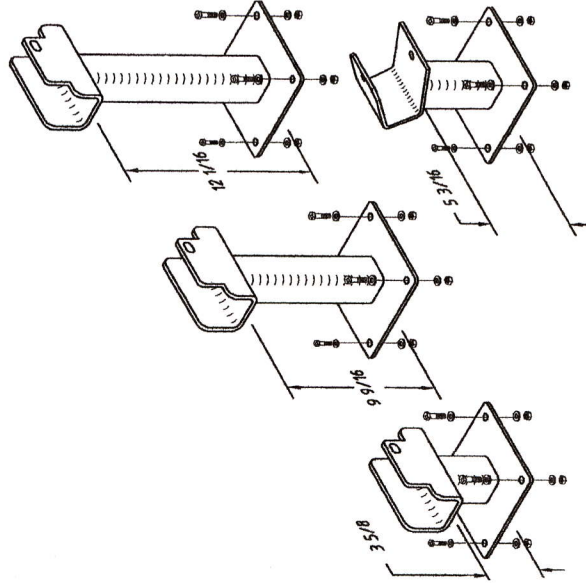

WD-5260T Tall Bracket Kit (12 1/16") for 5.70x8 Dollies

WD-5260S Short Bracket Kit (3 5/8") for all Dollies

Allows either 4.80x8 or 5.70x8 Dollies to be stored unlocked/unlatched. Many operators prefer the short brackets because the dollies take up less deck space in the unlocked/unlatched position.

WD-5280 Angle-mounted Dolly Bracket Kit

Allows 4.80x8 Dollies to be stored in a tilted-back orientation. This eliminates having to lift the dolly in/out of the brackets. It's easier to tilt it forward/backwards and position the dolly into the storage bracket.

Also Available:

MP-1313 Tie-Down Straps (pr.) Required for safe dolly towing

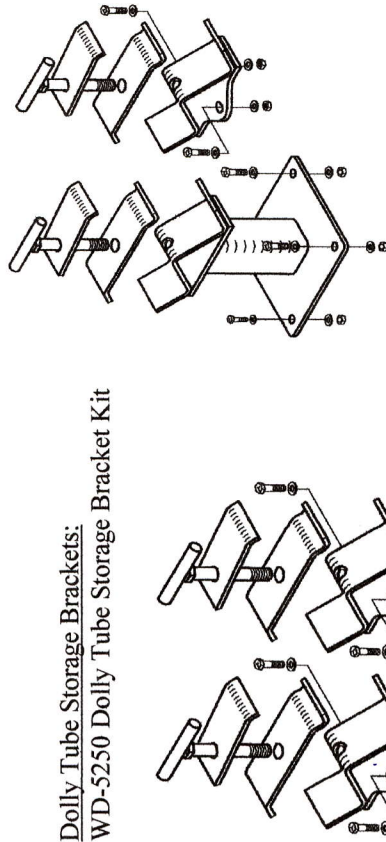

Tie-Down Straps should always be used whenever a vehicle is being towed on dollies. They secure the dolly to the vehicle and insure that it can't separate from the dolly. Separation can occur to an unsecured vehicle in a panic stop, on impact with a deep pothole, or even from contacting a low shoulder on the roadside. Properly secured Tie-Down Straps will not allow separation.

WD-5270 Dolly Wheel Pans (pr.)

Used to convert a Self-Loading Dolly into a conventional Pan Dolly. In some instances, it's best to set the dolly up conventionally, and lift the vehicle into the dolly, such as if the wheels/tires have been removed. The Wheel Pans do not allow Self-Loading operations, but they do give you another option for unusual situations.

Dolly Tube Storage Brackets:

WD-5250 Dolly Tube Storage Bracket Kit

WD-5290 Offset (5 5/16")
Dolly Tube Storage Bracket Kit
For use on Dynamic bodies.
